

# Industry 4.0 Foresight

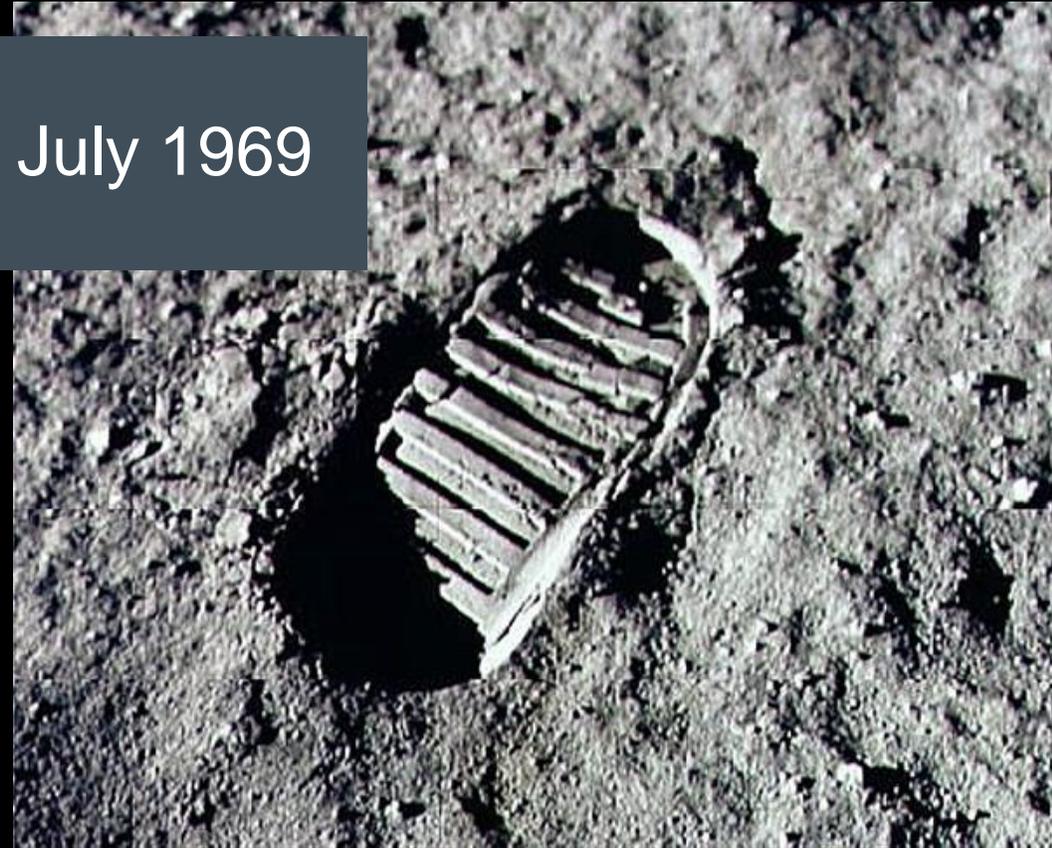

...‘the ability to predict what will happen or be needed in the future.’

forethought  
preparedness  
caution  
vigilance  
anticipation  
attentiveness  
readiness  
planning  
prudence  
provision

12 Sept 1962

16 July 1969

Any great vision takes great foresight

Digitalize 2019 Brisbane

## Double edged sword of Industry 4.0

### Competition

Ability to compete with anyone in the world – (anyone can compete with us)

### Economic

By 2030, machine learning could contribute nearly \$16 trillion to the global economy (ours to lose)

### Jobs

Better jobs, safer and more highly paid. Entirely new business models arise. (not ready with the skills)

### Liveability

Address climate change, transport gridlock & aging population, healthier for longer (or less attractive living standards)

### **\$21 trillion opportunity**

Industry 4.0 is poised to deliver growth and change, with digitalization and smart automation to add 14% to global GDP by 2030.

*Source: Industry 4.0*

*Workforce Transformation Report 2019*

By 2022, artificial intelligence  
and robots could displace  
almost ...

75 million jobs

However, another  
133 million new roles may  
emerge by 2022.

**Net gain of ...**

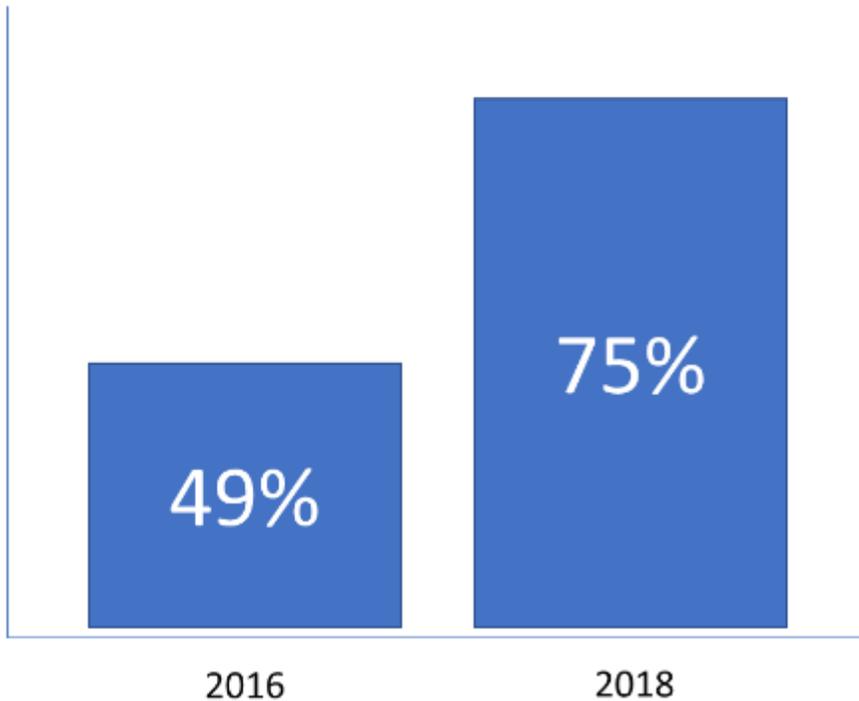

**58 million new jobs**

**Sounds great but...**

# Are we producing people with the right skills?

More employers reporting skills shortages (AiGroup survey)

...and yet we have more university students than ever

Total Undergraduates Enrolled  
2016 = 895,468  
2018 = 938,894

Up 4.8%

The total number of people doing Post-Grad  
2016 = 322,785  
2018 = 362,484

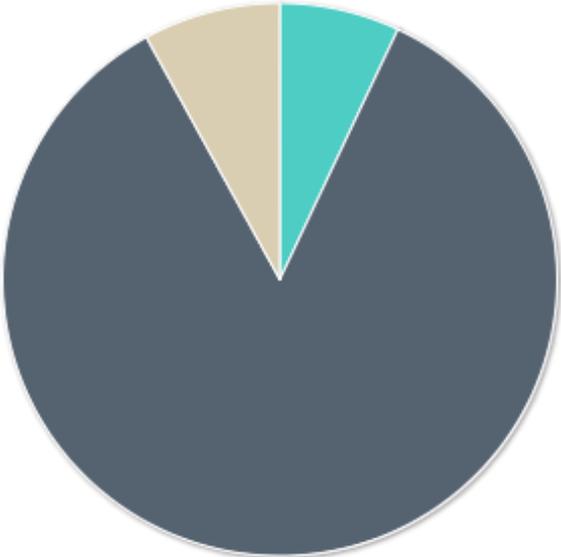

Up 12.3%

# As individuals are we blind and deaf to the reality?

Do you think your job could be automated in the next 5 years?

View:  

Choices	Results
Yes	7%
No	85%
Unsure	8%

Polling from Siemens Digitalize 2019 (Brisbane July)

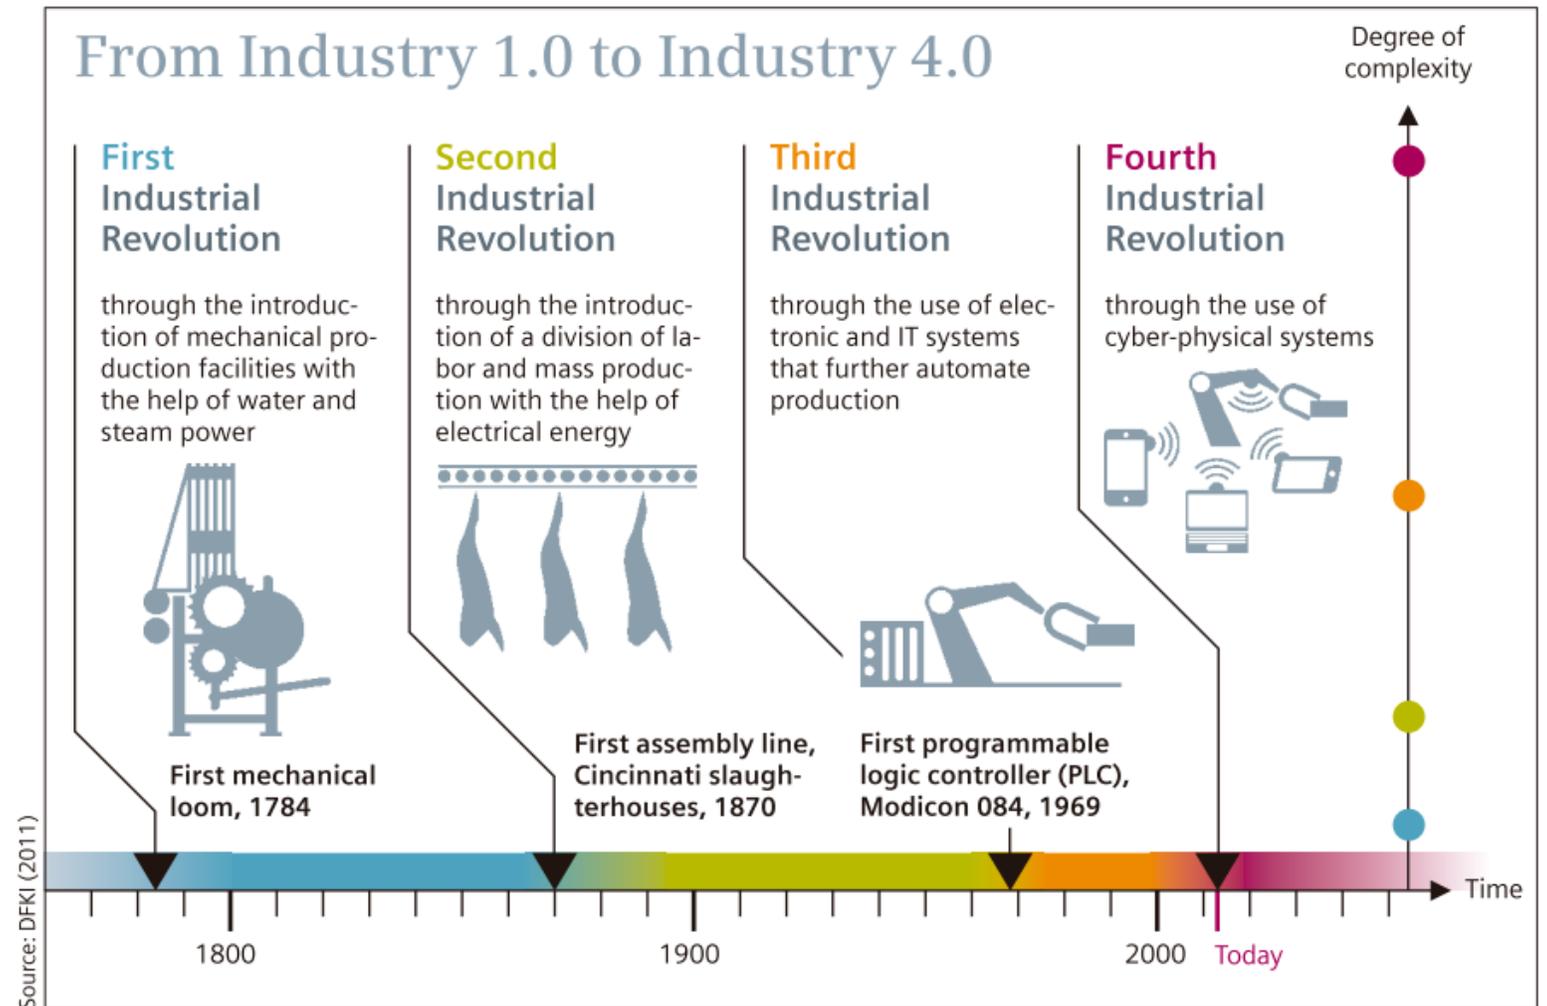

“Automation affects other people’s jobs but not mine!”

# Industry 4.0 – the Fourth Industrial Revolution

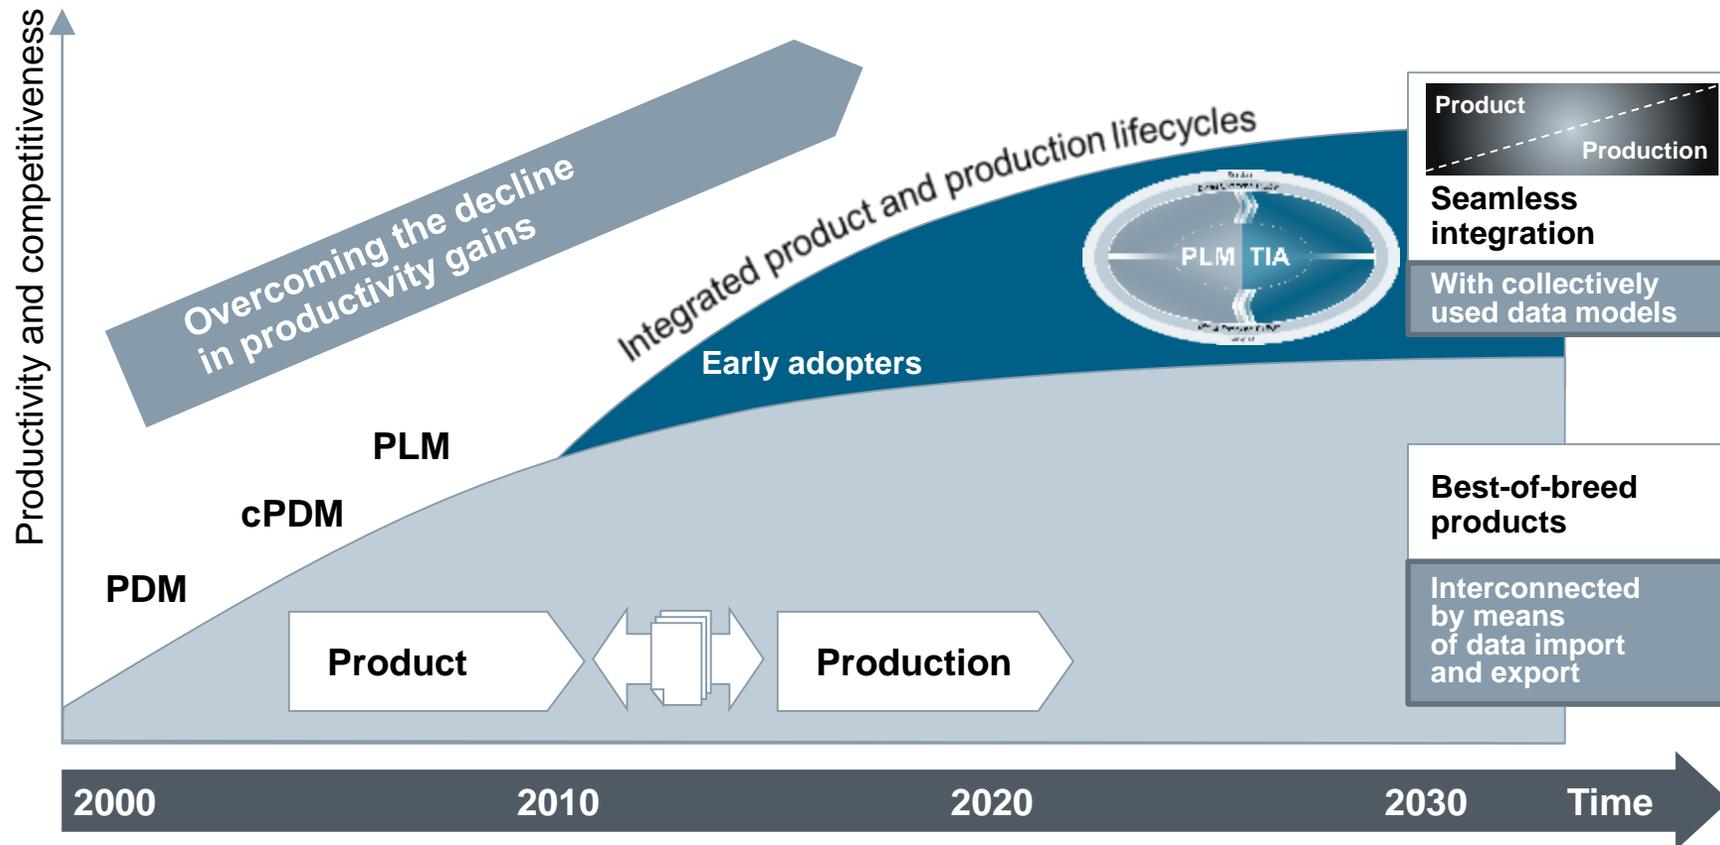

From the computer to the production line, new technologies are shrinking the time between virtual planning and manufacturing.

- ▶ As information generated in the virtual world flows into real manufacturing processes, new production environments will emerge.
- ▶ Design and manufacturing processes are changing – how we service equipment will also change.
- ▶ **Next steps require collaboration between major industrial companies, academic research institutes, and governments.**

# Industry 4.0 and why we care

**Manufacturing productivity is declining. Industry 4.0 delivers the next productivity gains. From 1995-2008 manufacturing productivity was 2.4%. From 2008-2018 it was 0.6%.**

**Integrating product and production lifecycles can reduce time-to-market by 50%**

“Manufacturing creates value across the economy through its demand for research and development, design and engineering services, production, logistics and after sales service”

*Karen Andrews*

*Government Media Release: August 2019*

... “what we know for certain is that productivity is the key to sustained growth and higher incomes.”

*Josh Frydenberg Federal Treasurer.*

*22 June 2019*

*The Weekend Australian*

What does Industry 4.0 technology look like?

# What does Industry 4.0 look like?

Industry 4.0 - Digital Twin underpins the future of manufacturing with many examples

## Firewire Surfboards

Siemens PLM Software, has helped Firewire revolutionize surfboard design and production  
Rapid prototyping  
Batch of 1 – customised mass production

## Siemens Amberg Factory

1,200 different products -production line must change configurations 350 times a day. Through digital twins, technicians can see quality defects in real time, immediately make design changes and adjust supplies and materials:

## Formula 1 Racing

1,000 design changes every week are first tested in a virtual world before being implemented physically.  
30,000 design modifications in the course of a season.  
800 different components for a new front wing.

# Paperless Manufacturing

- Batch size 1  
(100 litres)
- 1/50<sup>th</sup> of the size
- 1/8<sup>th</sup> of the time
- Removed 75,000  
manual steps

## Dulux Australia: Hannover Fair 2018

Process Industry Best practice I 4.0 on show for the world.  
Australia can re-shore manufacturing!

What are we doing about it?

## Australia Germany Advisory Group Established in 2014 following the G20 held in Brisbane

Co-chaired by Hon Mathias Cormann and German Minister of State at the Federal Foreign Office Professor Dr Maria Böhmer,

The group comprised senior leaders from business, academia, and the arts.

59 recommendations

The report was presented to Prime Minister Turnbull and Chancellor Merkel in Berlin on 13 November 2015.

10. SAP and Siemens will collaborate with government and industry in both countries to promote increased thought leadership on digital transformation, including initiating a **collaborative approach to the development of global Industry 4.0 standards.**

The Prime Minister's **Industry 4.0** Taskforce

Research and innovation  
Chair: Johannes Diemer, Hewlett Packard

Security of networked systems  
Chair: Michael Jochem, Bosch AG

Work, education & training  
Employment, Apprenticeships & Life-Long Learning  
Chair: Dr. Constanze Kurz, IG Metall

Testlabs Chair: Prof Aleksandar Subic, Swinburne University

OTHER KEY STAKEHOLDERS

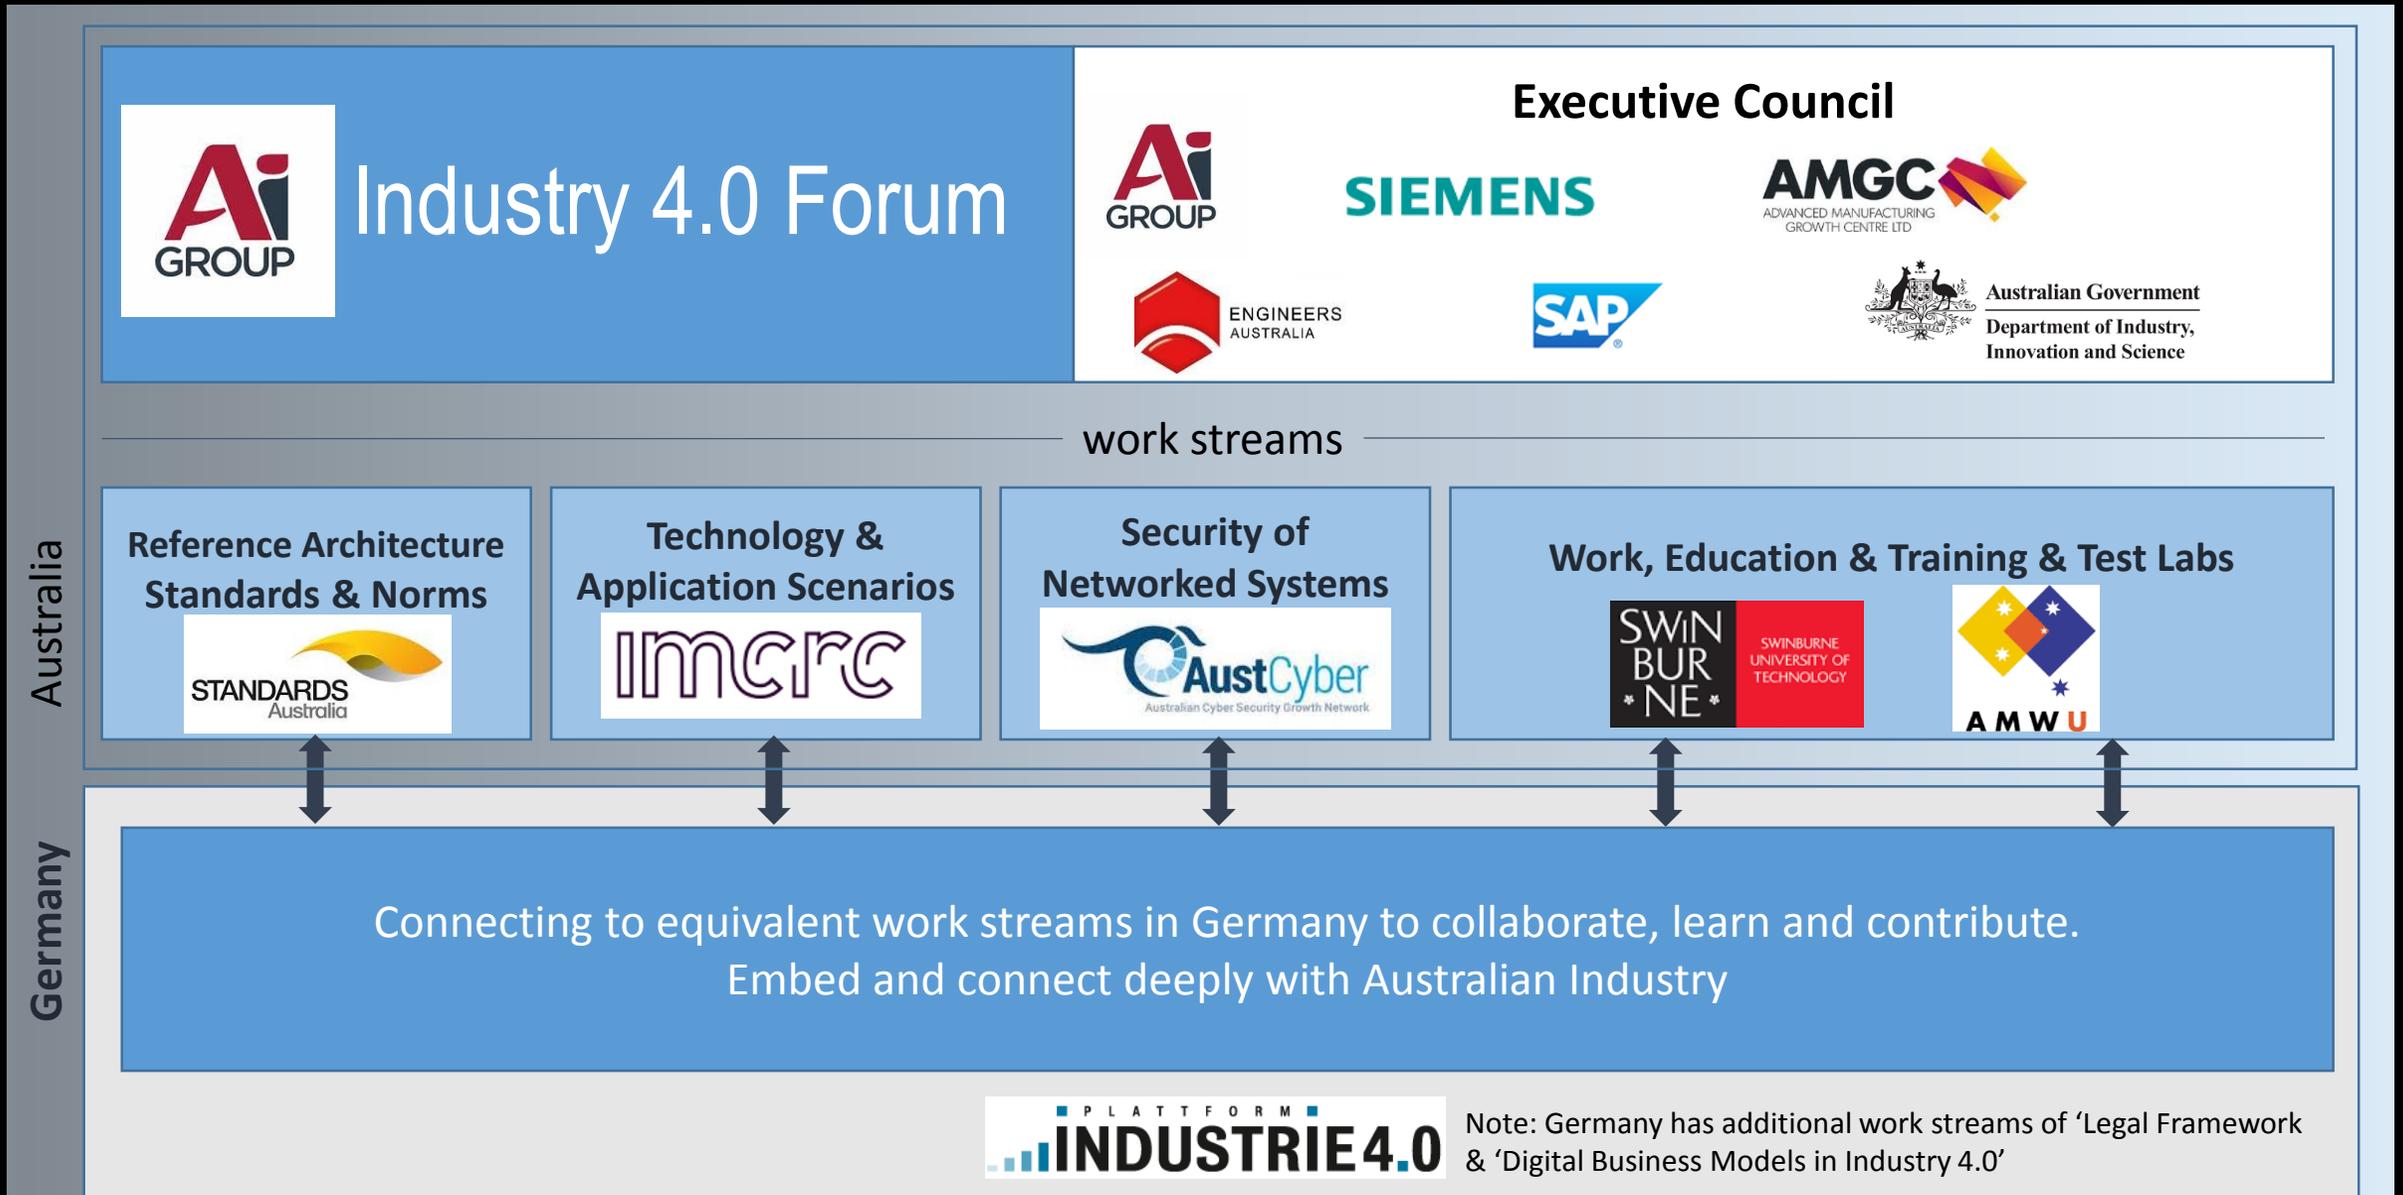

- AGAG – Minister for Finance
- Minister for Industry, Innovation and Science
- Department of Industry, Innovation and Science
- Department of Foreign Affairs and Trade
- Department of the Prime Minister and Cabinet
- German Embassy Canberra
- German-Australian Chamber of Industry and Commerce

Note: A 'legal framework' working group is likely to be established in the near future.

This led to an international collaboration agreement signed in April 2016 in Hannover – the world's largest industrial trade fair. With Minister Zypries and Ambassador Lynette Wood. One of only 5 countries to have such an agreement.

Collaboration in Action: Australia – Germany Work Stream meetings at Hannover Messe April 2019

# Industry 4.0 is a framework for Societal Transformation

Preparation for the future of work, skills and education

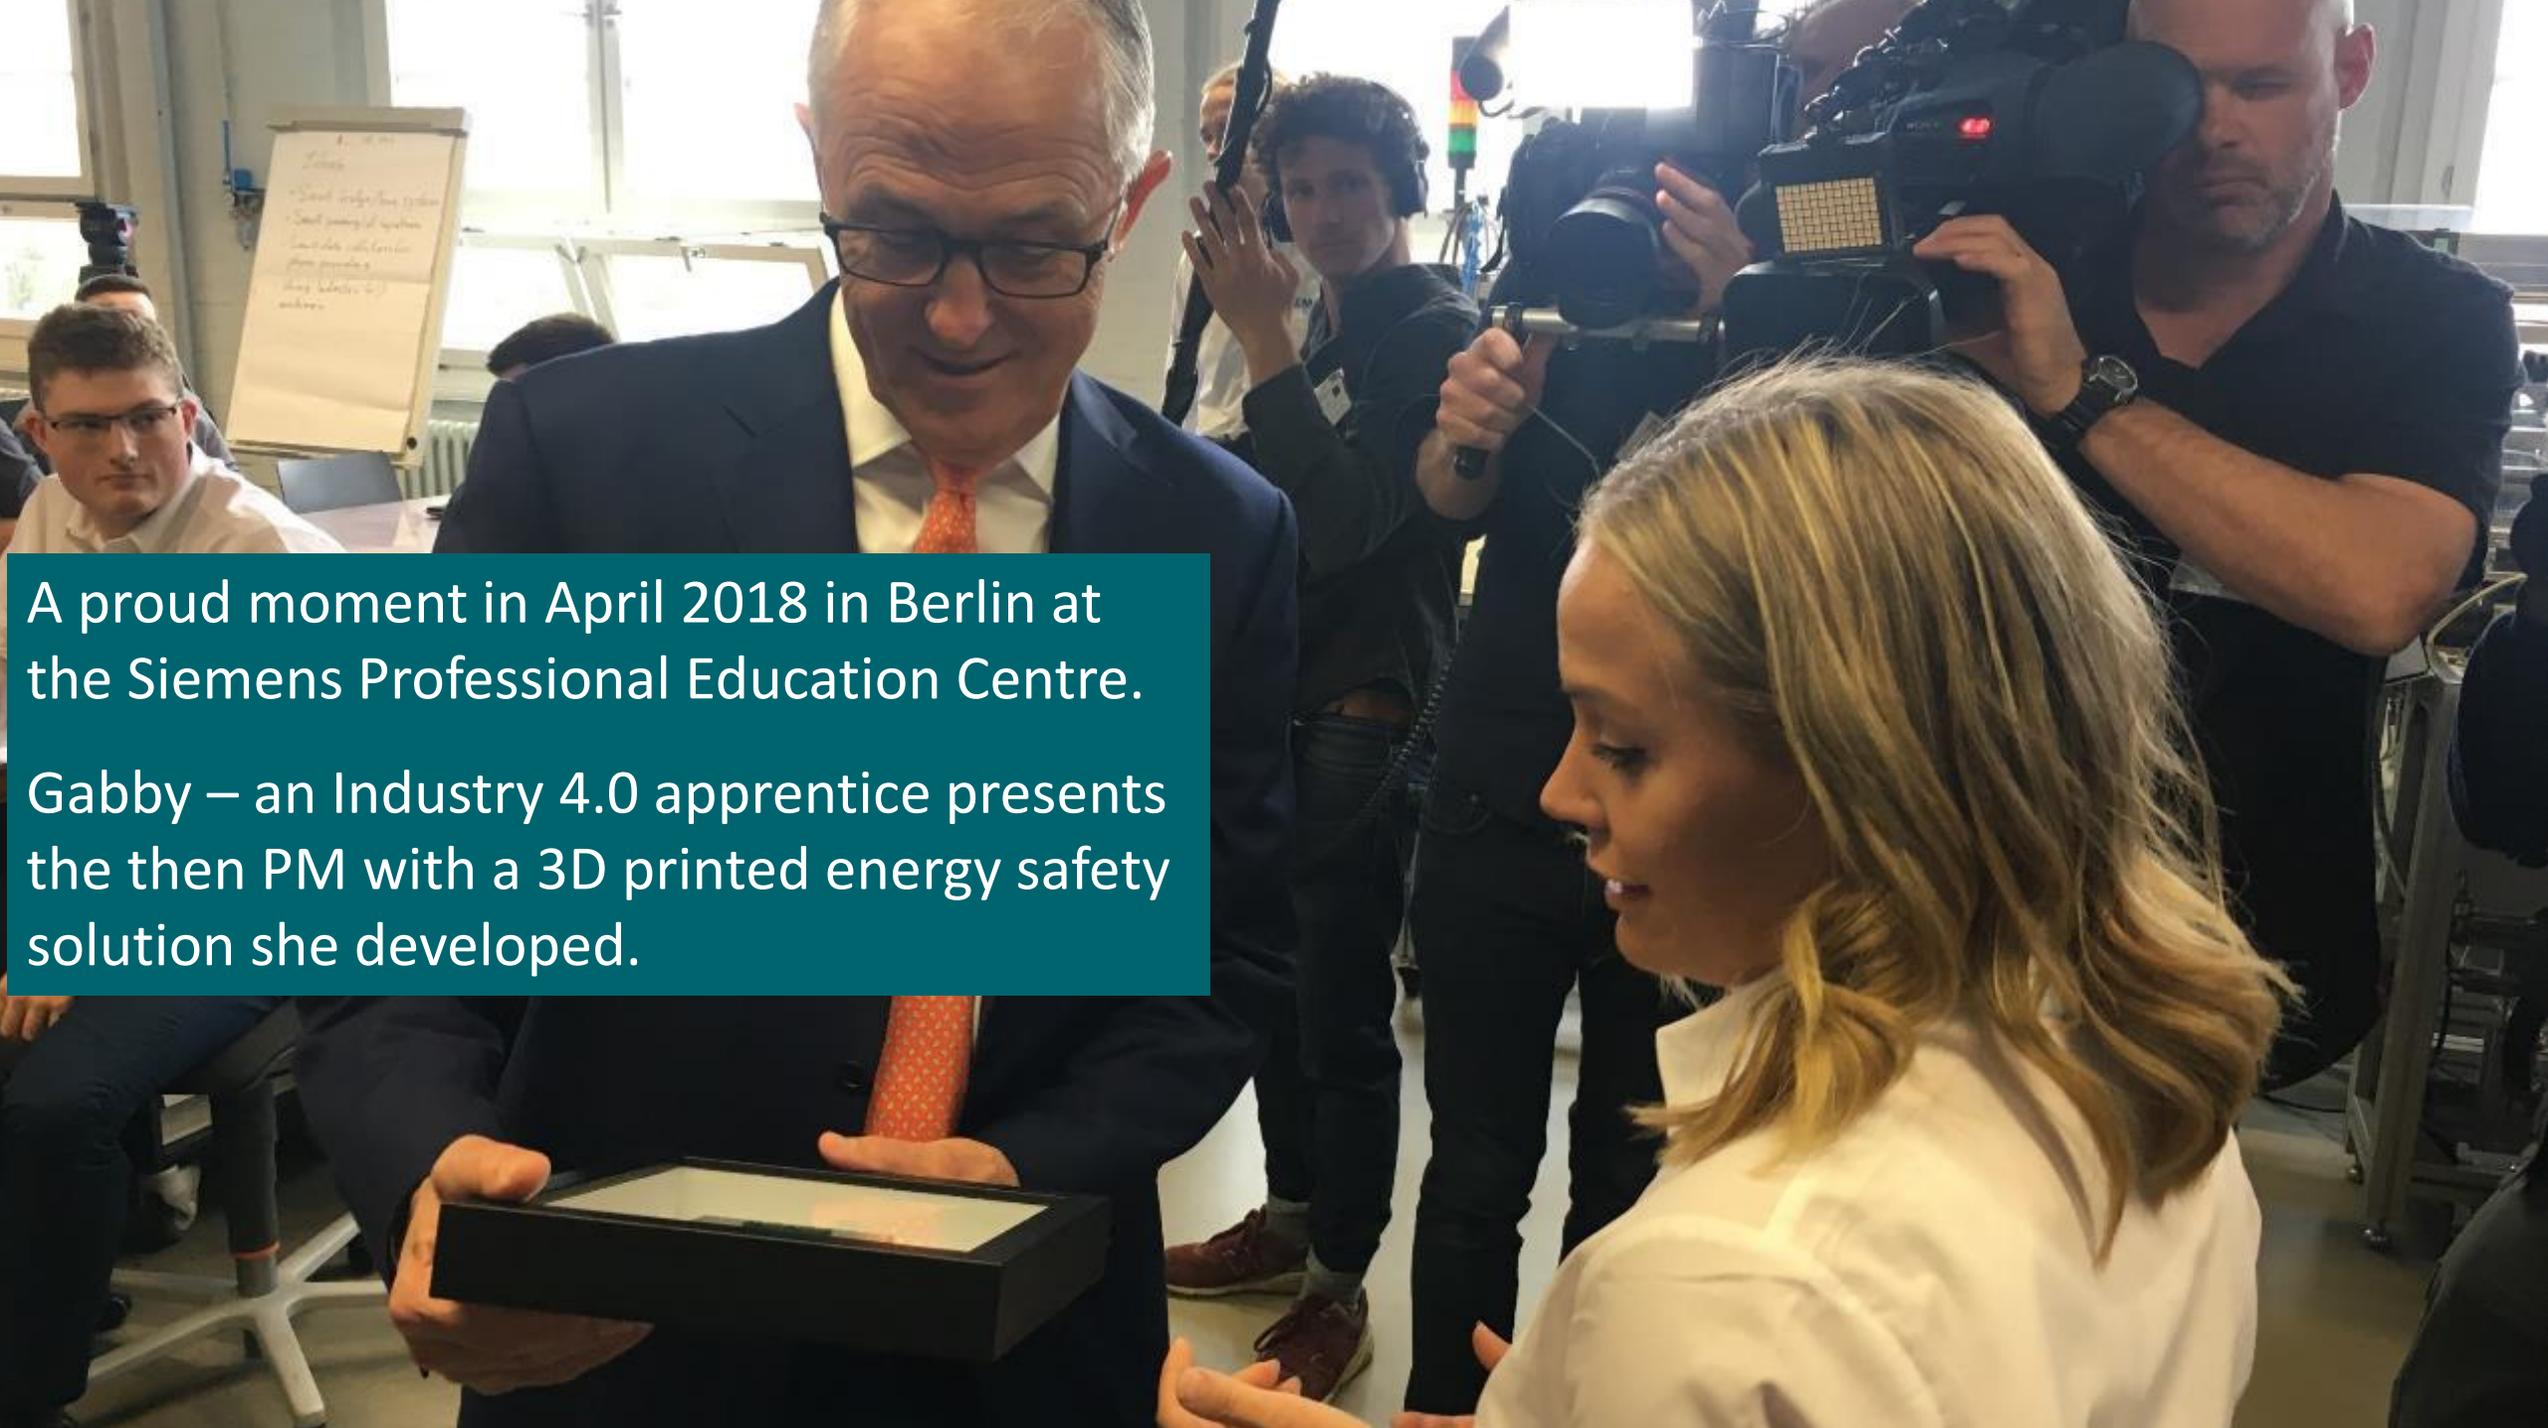

Strategic program to build Industry 4.0 'capability' across Australia – future orientated skills

# Industry 4.0 Apprenticeship Program

Unique partnership to prepare workforce of the future...

April 2018, Siemens Professional Education Centre Berlin

A photograph capturing a moment in a professional setting. In the center, a man with glasses, wearing a dark blue suit, white shirt, and orange patterned tie, holds a black rectangular box containing a 3D printed object. He is looking down at the object with a slight smile. To his right, a woman with blonde hair, wearing a white shirt, is presenting the box to him. In the background, a man in a dark shirt is operating a professional video camera on a tripod, filming the scene. Other people are visible in the background, including a man in a white shirt on the left and another man in a dark shirt in the center. A whiteboard with handwritten notes is visible in the background on the left. The scene is brightly lit, likely from large windows in the background.

A proud moment in April 2018 in Berlin at the Siemens Professional Education Centre. Gabby – an Industry 4.0 apprentice presents the then PM with a 3D printed energy safety solution she developed.

# Job ready people: diverse outcomes from one program

Out of the first batch of Industry 4.0 Apprenticeship graduates:

Engineering System  
Architects in future  
Tech

Cyber Security Sales  
Support Professional

Predictive Data Analysts

Digital Engineering  
Technician

Application Services  
Engineer

Digital Service Engineer

Digital Customer Service  
Sales Consultant

# Preparing the workforce of the future

\$1.5 billion in hi-tech Siemens PLM software

Accelerating Australia's journey to a digital economy and the fourth Industrial revolution

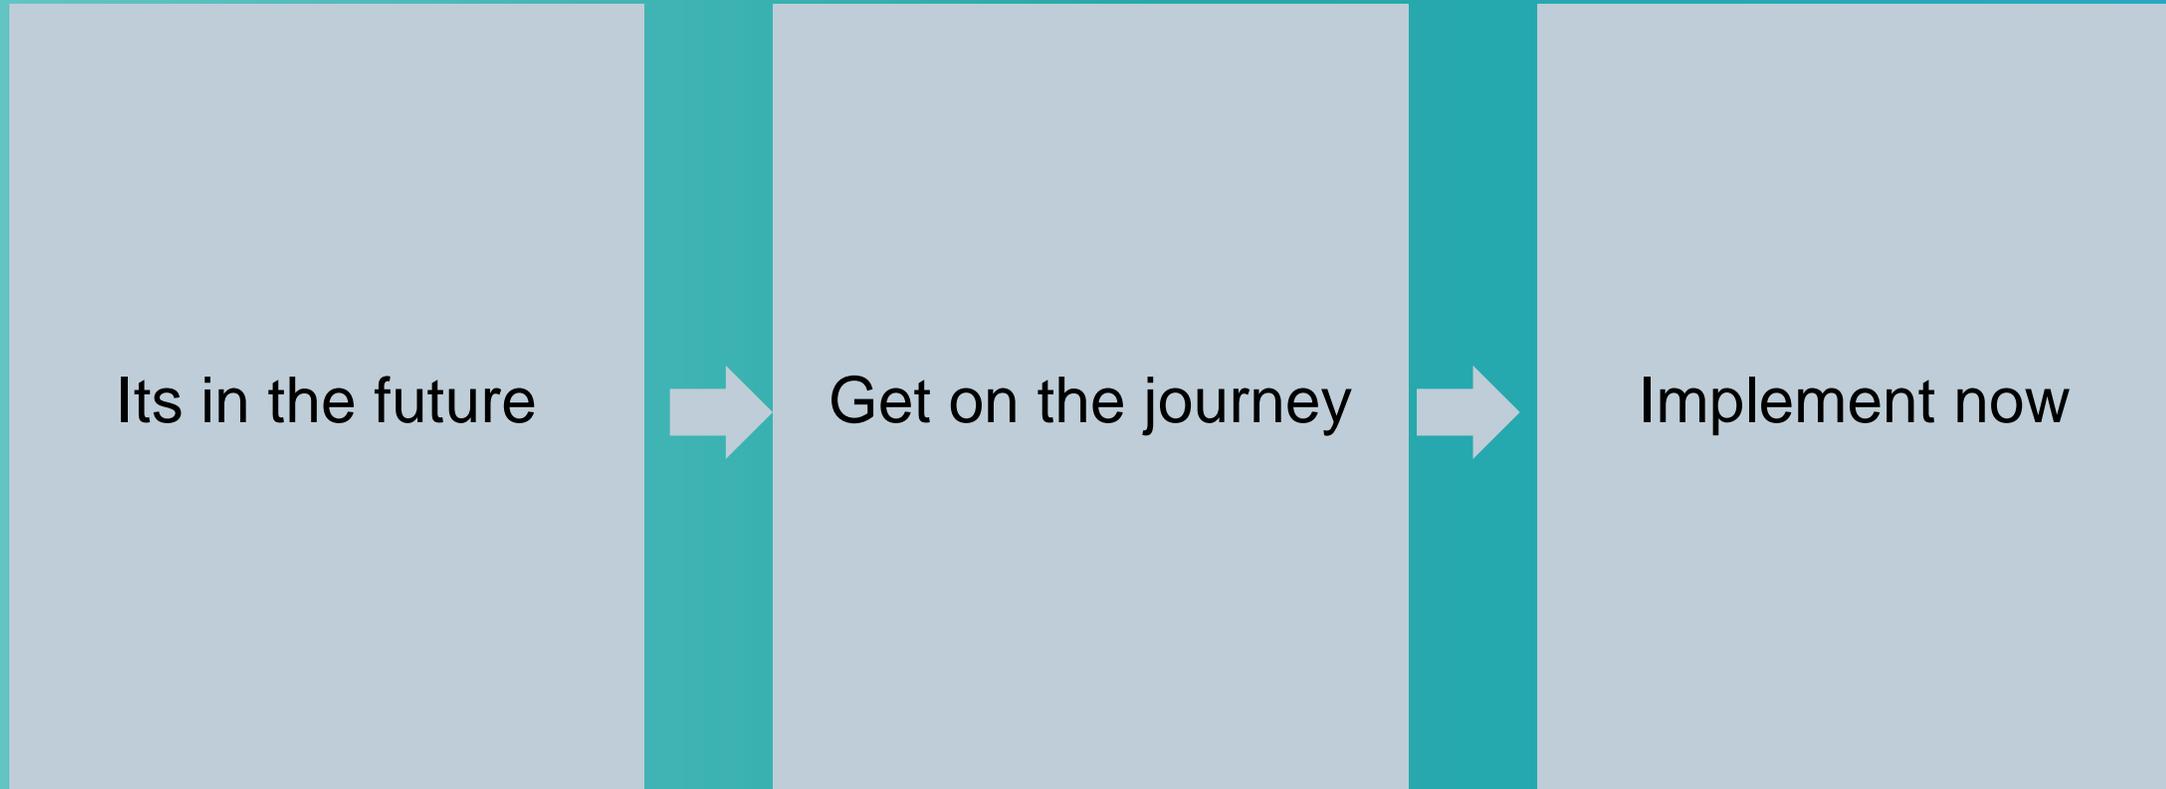

National skill building program stemming from work of Prime Minister's Industry 4.0 Taskforce

Collaboration – Industry partnerships with academic institutions to provide the skills and tools

## Industry 4.0 – a changing landscape... *feel the urgency*

The message has changed since we began talking about Industry 4.0

Fifty years later... a modern phone has 100,000 times more processing power than the Apollo Guidance Computer.

**The Apollo Guidance Computer:**

- 4 Kb RAM
- 72 Kb of ROM
- 0.043 MHz Processor
- Landed man on the moon

**My iPhone:**

- 4GB RAM
- 512 GB ROM
- 2490 MHz processor
- Let's me watch a video of man landing on the moon.

By embracing Industry 4.0, imagine what we can achieve if we have the foresight
